Frontend

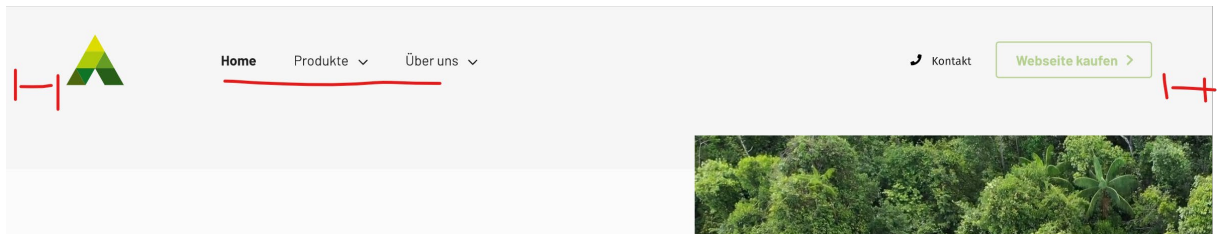

The Frontend looks pretty good. But all in all the components are a little too big compared to the XD-Design. Here's a list of what needs to be done, if possible:

- All buttons should be slightly smaller
- Nav smaller and a different width – like in the XD-Design (screenshot 1)
- All fonts slightly smaller (if possible, put the correct colors, but it's ok if not)
- Accordion: the link in the extended text should look like the arrows in the post & portfolio modules (screenshot 2)
- Accordion: text which appears should take 2/3 of the page, not the whole width
- Check out the XD-Design in general and all the distances, sizes of fonts, etc. (screenshot 3)
- In the tablet size of the screen (for example iPad), the logos in the logo module don't fit in the boxes (screenshot 4)
- The order of the navigation points in the mobile version is wrong

Backend

- Is it possible to set a background color to a module (for example « text ») which covers the whole width of the screen – not only the width of the div?
- It should be possible to upload a video **OR** image in the hero module (screenshot 5)
- Set the correct module names
- The upload field in the text module should not be for a background image but for pdfs and images we then can insert into the markdown field
- Sometimes the title field is called «Heading» and sometimes «Title » - please use «title» everywhere
- Subtitles in the portfolio and post pages are missing
- Module «Spacer» is missing
- The images of the different portfolio posts should be in a «masonry» structure (like you see in the xd-design), not every picture has the same height and width
- In the Portfolio item page the configuration buttons to set the visibility and width of the picture etc. don't really work. Is that my fault or is something missing ?
